| P.unadj P.adj Observations ttions: ba) | 0.4728737 39-13 Maximum macroscopic sodium current Maximum current density developed, at Maximum conductance developed, adju Maximum conductance density developed Observed reversal potential of the sodiu Membrane potential at which maximur | developed djusted for capacitance usted for driving force sed, adjusted for driving force and capac um current-voltage relationship m current is developed | | Definitions: V ^{act} _{1/2} (mV) k ^{act} (mV) V ^{inact} _{1/2} (mV) k ^{inact} (mV) RFl _{slope} (ms mV ⁻¹) Tau _{oofi} (ms) | The rate of current development over The voltage at which half-maximal st The rate of current decay over the vol The rate of recovery from inactivation The time constant of onset of inactiv. | r the voltage range through V ^{act} _{1/2} teady-state inactivation is achieved Itage range through V ^{inact} _{1/2} n (RFI) over the voltage range -100 to -80 ation while exposed to near-peak window | current potential |
| P.unadj P.adj Observations itions: ba) ba pF ¹ (pA mV ¹ mv mv l _{max} (pA pF ⁻¹ l _{wax} (pA pF ⁻¹ | 0.4728737 39-13 Maximum macroscopic sodium current Maximum current density developed, ai Maximum conductance developed, adju Maximum conductance density develop Observed reversal potential of the sodiu | developed djusted for capacitance usted for driving force bed, adjusted for driving force and capac um current-voltage relationship m current is developed vindow current is achieved | | Definitions: V ^{act} _{1/2} (mV) k ^{act} (mV) V ^{inact} _{1/2} (mV) k ^{act} (mV) Rel _{alope} (ms mV ³) Tau _{oofi} (ms) G _{alope} (pA pF ⁻¹ mV ⁻¹) | The rate of current development over The voltage at which half-maximal st The rate of current decay over the vol The rate of recovery from inactivation The time constant of onset of inactiv. This is the slope of the linear portion | r the voltage range through V ^{act} _{1/2} teady-state inactivation is achieved Itage range through V ^{inact} _{1/2} n (RFI) over the voltage range -100 to -80 | r current potential gh E _{rev} |

^{*}Note: Shaded values represent adjusted p-values falling below the predetermined cutoff (α = 0.05).

*Note: "WT" refers to the ancestral, TTX-sensitive sodium channel; "EPN" refers to the 3-point mutant from Thamnophis atratus; and "LVNV" refers to the 4-point TTX resistant mutant from Thamnophis sirtalis.
